# Dedicated Server Hosting

### What is a Dedicated Server?

Dedicated hosting, sometimes called dedicated server hosting providers like **DedicatedCore** and **DomainRacer** offers it is a web hosting plan in which the customer is assigned a complete physical server for their web hosting needs.

Unlike shared hosting plans, the assigned server is the customer's server alone and is not shared by any of the other web host's customers. Virtual private server hosting in Australia offers [unmatched worldwide reach](#) to grow your ecommerce business by 2x faster.

While the server is actually still owned by the web host, the customer has a lot of control over the rented server, including the operating system installed, the software, firewall settings, and sometimes even the hardware.

Because the *DedicatedCore* and *DomainRacer* offer customers almost complete control over their rented server, it can be personalized according to individual needs,

unlike shared hosting plans in which the customer cannot install any additional software onto the server.

The main advantage of a dedicated server is that customers aren't sharing any of their web hosting resources with other customers. This means that if a customer runs a large, successful website, their traffic won't disrupt anyone else's website and no one else's website will disrupt theirs.

Customers on the **DomainRacer** plan experience a very high amount of bandwidth and can enjoy a large amount of storage space. Our dedicated server hosting gives [pre-configured colocation space](#) in Germany with a number of benefits like security, reliability, etc.

**DedicatedCore** offers dedicated server hosting plans that can guarantee a 99.95% uptime in service, and if any dedicated server customer experiences unexpected downtime, they can get in touch with customer support for that downtime.

In addition, *DedicatedCore* and *DomainRacer* providers' dedicated server hosting comes with priority customer support 24/7/365 days guarantee, and any resolve issues experienced can expect a quick resolution. DomainRacer forex vps server provides [stable trading hosting](#) with massive nvme ssd storage and 1gbps network in the USA.

Dedicated server hosting plans are highly secure and much more secure than their shared hosting counterparts. Because no resources are shared between customers, there is no fear of the security of one website affecting another.

For this reason, those businesses that perform a lot of e-commerce transactions would prefer **DedicatedCore** and **DomainRacer** as their dedicated server hosting provider.

Not only can this type of server handle the heavy load much better than the other hosting options, but the risk of any sensitive information being compromised is significantly lessened.

Dedicated server hosting works well for those web host owners with a higher level of technical expertise, such as web developers and system administrators. By discovering how to install Apache Tomcat on Ubuntu and [run Java-based applications](#) smoothly boost your web hosting capabilities.

Because more control is in a customer's hands with a dedicated server hosting, more responsibility is as well.

This means that much of the server administration is left up to the customer, which can be daunting for those who have no experience in that area of web development.

*DedicatedCore* and *DomainRacer* have an option for managed dedicated server hosting, at an affordable cost, to perform operating system updates, firewall updates, load balancing, and disaster recovery.

For some, this extra measure of support is necessary in a hosting plan. However, this supports **DedicatedCore** and **DomainRacer** offers with a dedicated server hosting

plan. Streamline your Linux workflows and discover how to use the xargs command to [handle large inputs and manage output](#) effectively.

The higher price is the biggest downside to a dedicated server hosting plan, which is why most businesses and already successful websites opt for this plan, and rarely would a smaller personal website need something quite so robust.

However, the cost of choosing a dedicated server hosting plan has been decreasing over the past several years, and it has begun to be a more attractive and available option to web owners who could not have previously afforded it.
